Snowman Co., Ltd uses its advanced SRMTEC open-type screw compressors and launches full series of standard open-type marine screw compressor units through optimized design. It can produce refrigeration power in various conditions such as high, medium or low temperature so as to provide the most economic, energy saving, efficient and safe marine unit solutions for customers. Having compact structure the units can run safely and reliably with easy operation. They can be extensively used in such fields as cold storage and food refrigeration, low-temperature processing, quick freezing, air conditioning and all other fields in need of artificial refrigeration onmarine vessels.

## CS Open-Type Marine Screw Compressor Unit

Fully automatic control, excellent energy efficiency performance, reliable and safe design, wide temperature range and highly integrated design.

## Features

### Advanced intelligent control center

- User-friendly interface, startup with the press of a button, easy operation and intelligent control;
- Real-time unit monitoring, touch panel capable of displaying system pressure, power capacity, control position, running time, operational mode, operating condition, etc. in real time and capable of storing historical information;
- The center is equipped with a preventive safety device system which allows unattended operation to be safe and reliable;
- Automatic power control allows the unit to operate effectively under different conditions;
- Automatic management of oil temperature limits the oil temperature in a certain range, ensuring the efficient and stable operation of the unit;
- Automatic control of pressure ensuring the exhaust pressure, intake pressure, etc. are within the preset range;
- With vector frequency conversion control, the unit is capable of adjusting the rotational speed according to the conditions and reasonably distribute motor rotational torque, allowing energy-efficient operation and low cost;
- Remote control, local control and other control modes are available for the system to turn on and turn off equipment, it can also be linked to the monitoring center in real time by reserved bus protocol.

### Excellent energy efficiency performance

- The package is equipped with international leading SRMTEC open screw compressor. Use "i" patent screw rotor profile, efficient and energy-saving;
- Highly sensitive capacity control unit for 10%-100% step-less capacity control and VI control allows package to run efficiently in different working conditions.
- Adopt small oil pump for pre-lubrication first, and then use pressure differential to supply oil, which saves energy;
- High pressure liquid from condenser gains extra cooling power by being injected into compressor after absorbing the sensible heat of the high pressure liquid in economizer. COP can be improved greatly in this way;
- Advanced energy-saving technology allows package to have quite high running efficiency and excellent part load performance.

### Safe and reliable design

High standard safety design, such as high pressure resistance compressor design, high standard pressure vessel design, safety valve design and preventive safety protection design. SRMTEC compressors fully conform to European industrial product standard and GB/T19410 design standard, ensuring stable and reliable running around the day with design pressure up to 2.8 MPa.

### Wide applicable temperature range

CS open-type marine screw compressor unit has a wide range of applicable temperature:  
 $-65^{\circ}\text{C} < \text{Evaporating temperature} \leq 10^{\circ}\text{C}$ ;  
 $25^{\circ}\text{C} < \text{Condensing temperature} \leq 60^{\circ}\text{C}$ ;  
 Temperature is subject to special design required by customers.

### Highly integrated design

The optimal structural design, highly integrated unit, small occupation, convenient transportation and short engineering and installation time.

### Efficient oil separator

Efficient oil separator is adopted, with special internal tilt prevention design to prevent refrigerant oil from flowing back to compressor because of the motion of the ship.

### Efficient heat exchanger

Optimized heat exchange design, which ensures efficient heat exchange and improves the efficiency of unit.

### Fine and removable filter

To ensure the cleanliness of system, the unit is equipped with large capacity precise oil filter, suction filter to stop foreign matters which might occur in refrigeration during installation and keep unit running efficiently and stably. Filters are easy to use and can be removed for cleaning.

### Anti reverse flow design

In order to prevent the reverse flow during machine shut down, the package is equipped with check valves on discharge side and suction side. The check valve on discharge side locates on the discharge port of oil separator, which can also prevent the liquid refrigerant in evaporating condenser from flowing back to oil separator during shut down.

### Stable product quality

- Swedish hundred years' technology of SRM has been proved by global applications;
- Full performance test before delivery ensures product stability.

## Unit technical overview

### Control center

The system adopts internationally famous PLC brand in the core of control, equipped with 64k true color touch screen, the whole operation process can be controlled, historical data can be saved.

### Easy Operation

Friendly interactive interface, multiple languages to choose from. One-button operation mode simplifies the boot process.

### Dynamic tracking

Real-time monitoring of the unit, touch panel capable of displaying system pressure, power capacity, control position, running time, operation mode, and operation condition in real time. Unit automatically records all faulty messages, the faulty messages include the detailed description of the abnormal situation and the corresponding solution, makes it convenient for maintenance staff to do rapid diagnosis and troubleshooting.

### Safety protection

Equipped with preventive safety protection system, unattended operation is also safe..

### Hierarchical password access

Provide the operator with a hierarchical security access password; in case non-professionals input incorrect parameters. There are 3 levels of access, and each level has its own password.

### Inverter control

Frequency conversion control can be used, it can rationally distribute motor rotational torque, and enhance the unit efficiency.

### Various communication modes

The system adopts remote/local control mode to start or stop; it can also be linked to the monitoring center by reserved bus protocol in real time.

## Compressor

### Rotor

- SRM patented "i" screw rotor profile line, optimal 5+7 tooth mesh combination, high efficiency, low vibration, running stably;
- Use high quality forged steel material, high wear resistance, high strength, strong liquid impact resistance, applicable to a wide range of refrigerants;
- Big shaft dimension, large torque.

### Housing

- Adopt ductile cast iron material for high strength housing design, working pressure can be up to 2.8Mpa;
- Can change the economizer port according to real conditions.

### Bearing

Precision high wear resistant compositon rolling bearings can apply to high density refrigerant load; the design lifetime is 100,000 hours.

### Shaft seal

- Innovative shaft seal structure, even stress distribution, stable running, low wear, high sealing, prevent leakage effectively;
- SiC wear-resistant sealing surface, applicable to the rotation speed of 10,000 rpm.

### VI control

VI control can achieve the optimal pressure ratio, high efficiency and energy-saving. Compressor is equipped with manual VI control function, which is independent from capacity control to ensure efficient running under different working conditions. The automatic VI control also can be selected to realize the switch between different working conditions.

### Capacity control

- 10%-100% step-less capacity control and intelligent controller with accurate positioning;
- Capacity control structure is highly sensitive, the load changes can be achieved in 30 s;
- Without electricity, unloading control can be realized by slide valve design;
- World unique explosion-proof device for energy regulation cylinder.

### Multi-points oil injection cooling

Multi-points oil injection cooling can ensure efficient and stable running of compressor.

### Sealing for whole package

- Adopt high quality O-ring, super sealing, safe with no leakage;
- Highly precise alignment, the compressor can run smoothly.

### Motor

- Marine asynchronous motor is adopted for unit. The motor design is safe and reliable, with high efficiency, low vibration and low noise;
- The unit is equipped with 380V motor;
- For start-up methods, it can select star-delta start-up, soft start-up or variable frequency start-up;
- Motor installation type can be B35 or B3.

### Adapter

Adaptors may be provided to integrate the compressor and motor, achieving good center alignment and more stable operation of compressor and motor.

### Oil separator

Subject to the actual operating requirements on ship, efficient vertical oil separator is adopted, with special internal tilt prevention design to prevent refrigerant oil from flowing back to compressor because of the motion of ships to ensure the efficient, stable and reliable running of unit.

### Heat Exchanger

- Optimized heat exchange design, which greatly improves the efficiency of heat exchange and ensures the efficient running of unit;
- Oil cooler -exclusive anti corrosion measures are taken to ensure the usage of seawater heat exchanger reliable;
- Economizer -unit is equipped with economizer under low-temperature working condition, which increases the liquid subcooling before it flowing into the expansionvalve, thus greatly increasing the refrigeration capacity and refrigeration factor of the unit.

## Others

### Refrigerant

Various refrigerants such as R22 and R404A can be used.

### Accessories

All the elements in the system are produced by well-known manufacturers and of high reliability and quality assurance.

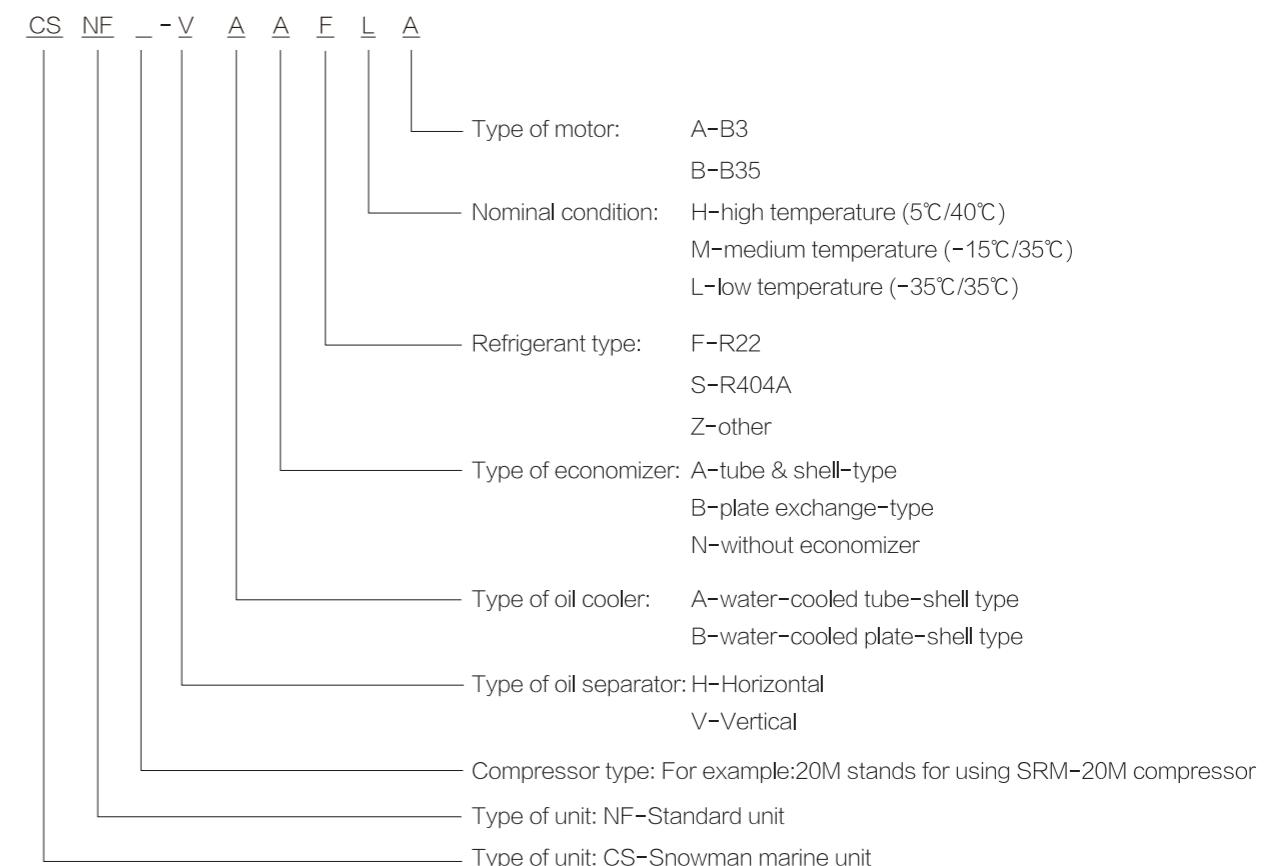

### Preventive protection

- An exhaust non-return valve is configured to prevent the backflow during shut-down so as to protect the compressor;
- Function of high and low pressure protection can protect the compressor and system so it can operate in severe working conditions safely;
- With oil level protection function, compressors can be prevented from being damaged by lack of oil;
- Safety valves are configured to prevent the system from high pressure.
- High and low voltage sides can be automatically isolated during sudden power failure.

### Specifications and standards

- CB\*3248-85 Technical Specifications for Marine Refrigeration Pressure Vessels;
- GB/T 18816-2014 General Specification for Marine Heat Exchanger;
- Rules for the Construction of Sea-going Steel Fishing Vessels (1998);
- Rules for Classification of Sea-going Steel Ships (2012);
- Regulations for Fishing Vessel and Marine Products Inspection (2003);
- GB/T 19410-2008 Screw Refrigeration Compressor;
- GB 5226.1-2008 Safety of Machinery-Electrical Equipment of Machines-Part 1: General Requirements;
- JBT 4330-1999 Measurement of Noise Emitted by Refrigerant and Air Conditioning Equipments.
