

## Data Sheet

# Solenoid valve Type **EVRA** and **EVRAT**

Capable of accommodating the higher pressures of refrigerants and a broader range of applications

EVRA is a direct or servo operated solenoid valve for liquid, suction and hot gas lines with ammonia or fluorinated refrigerants.

EVRA valves are supplied complete or as separate components, i.e. valve body, coil and flanges can be ordered separately.

EVRAT is an assisted lift, servo operated solenoid valve for liquid, suction and hot gas lines with ammonia and fluorinated refrigerants.

EVRAT is specially designed to open - and stay open - at a pressure drop of 0 bar. The EVRAT solenoid valve is thus suitable for use in all plant where the required opening differential pressure is 0 bar.

EVRAT is available as components, i.e. valve body, flanges and coil must be ordered separately.

EVRAT 10, 15 and 20 all have spindle for manual operation.

**Features:**

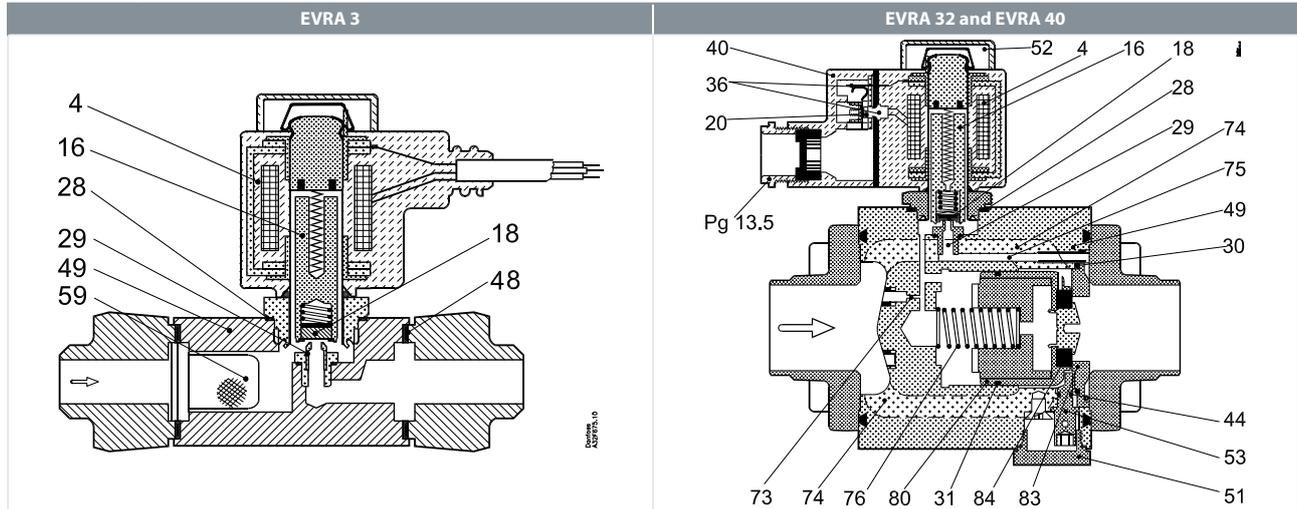

- Refrigerants: Applicable to HCFC, HFC and R717 (Ammonia)
- Temperature of medium -40 °C – +105 °C and Max. 130 °C during defrosting
- Classification: DNV, CRN, BV, EAC etc. To get an updated list of certification on the products please contact your local Danfoss Sales Company

## Functions

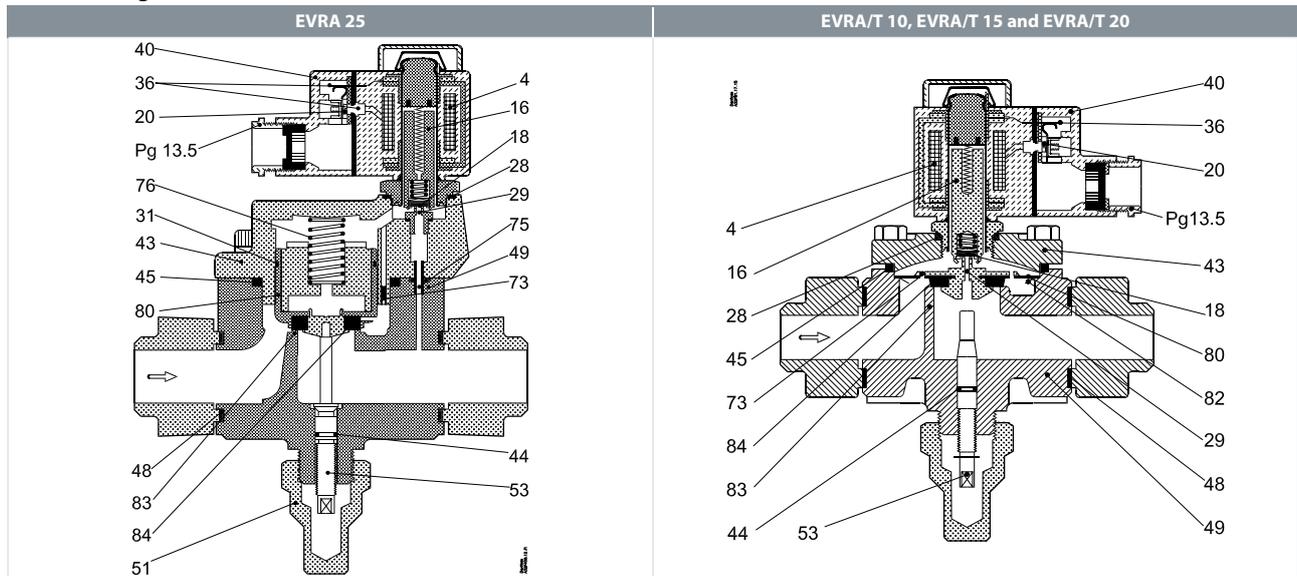

**EVRA solenoid valves are designed on two different principles:**

1. Direct operation
2. Servo operation

**Table 1: Design Function - EVRA 3, EVRA 32 and EVRA 40**

**Table 2: Design Function - EVRA 25, EVRA/T 10, EVRA/T 15 and EVRA/T 20**

<b>4</b>	Coil	<b>36</b>	DIN plug	<b>59</b>	Strainer

<b>31</b>	Piston ring	<b>53</b>	Manual operation spindle	<b>84</b>	Main valve plate

### **Direct operation**

EVRA 3 is direct operated. The valve opens direct for full flow when the armature (16) moves up into the magnetic field of the coil. This means that the valve operates with a min. differential pressure of 0 bar. The teflon valve plate (18) is fitted direct on the armature (16).

Inlet pressure acts from above on the armature and the valve plate. Thus, inlet pressure, spring force and the weight of the armature act to close the valve when the coil is currentless.

### **Servo operation**

EVRA/T 10 → 20 are servo operated with a “floating” diaphragm (80). The pilot orifice (29) of stainless steel is placed in the centre of the diaphragm. The teflon pilot valve plate (18) is fitted direct to the armature (16).

When the coil is currentless, the main orifice and pilot orifice are closed. The pilot orifice and main orifice are held closed by the weight of the armature, the armature spring force and the differential pressure between inlet and outlet sides.

When current is applied to the coil the armature is drawn up into the magnetic field and opens the pilot orifice. This relieves the pressure above the diaphragm, i.e. the space above the diaphragm becomes connected to the outlet side of the valve. The differential pressure between inlet and outlet sides then presses the diaphragm away from the main orifice and opens it for full flow. Therefore a certain minimum differential pressure is necessary to open the EVRA valve and keep it open. For differential pressure 0 bar use EVRAT valves. For EVRA 10 → 20 valves this differential pressure is 0.05 bar.

When current is switched off, the pilot orifice closes. Via the equalization holes (73) in the diaphragm, the pressure above the diaphragm then rises to the same value as the inlet pressure and the diaphragm closes the main orifice.

EVRA 25, 32 and 40 are servo operated piston valves. The valves are closed with currentless coil. The servo piston (80) with main valve plate (84) closes against the valve seat (83) by means of the differential pressure between inlet and outlet side of the valve, the force of the compression spring (76) and possibly the piston weight.

When current to the coil is switched on, the pilot orifice (29) opens. This relieves the pressure on the piston spring side of the valve. The differential pressure will then open the valve. The minimum differential pressure needed for full opening of the valves is 0.2 bar.

#### **i NOTE:**

The manual opener of EVRA/EVRAT 10, 15, 20 and 25 is intended to be activated only during initial pressure testing of the refrigeration system. After pressure testing or service-related manual forced opening of the manual opener the spindle must be turned fully back to back-seated position to avoid any packing gland leakage. Furthermore it is essential that the sealing cap is properly reinstalled. This will eliminate any risk of leakage from the manual opener.

## Media

### **Refrigerants**

Applicable to HCFC, HFC and R717 (Ammonia).

### **New refrigerants**

Danfoss products are continually evaluated for use with new refrigerants depending on market requirements.

When a refrigerant is approved for use by Danfoss, it is added to the relevant portfolio, and the R number of the refrigerant (e.g. R513A) will be added to the technical data of the code number. Therefore, products for specific refrigerants are best checked at [store.danfoss.com/en/](https://store.danfoss.com/en/), or by contacting your local Danfoss representative.

**Product specification**

**Pressure and temperature data**

Table 3: Pressure and temperature

Description	Values
Temperature of medium	-40 °C – +105 °C (Max. 130 °C during defrosting)

**NOTE:**

EVRA/T 20	51.7	73.0	89.5	103	116
EVRA 25	115	162	199	230	257
EVRA 32	184	260	318	367	411
EVRA 40	287	406	497	574	642

**NOTE:**

Capacities are based on liquid temperature  $t_l = +25\text{ °C}$  ahead of valve, evaporating temperature  $t_e = -10\text{ °C}$ , and superheat 0 K.

### Correction factors

When sizing valves, the plant capacity must be multiplied by a correction factor depending on liquid temperature  $t_l$  ahead of valve/evaporator. When the corrected capacity is known, the selection can be made from the table.

Table 12: Correction factors

$t_l, \text{ °C}$	-10	0	10	20	25	30	40	50

	0.15	27.2	35.4	45	57	68.6	81.5
	0.2	30.5	40.2	51	63.3	79.2	94

### **i** NOTE:

Capacities are based on liquid temperature  $t_l = +25$  °C ahead of evaporator. The table values refer to the evaporator capacity and are given as a function of evaporating temperature  $t_e$  and pressure drop  $\Delta p$  across valve. Capacities are based on dry, saturated vapour ahead of valve. During operation with superheated vapour ahead of valve, the capacities are reduced by 4% for each 10 K superheat.

### Correction factors

When sizing valves, the evaporator capacity must be multiplied by a correction factor depending on liquid temperature  $t_l$  ahead of expansion valve. When the corrected capacity is known, the selection can be made from the table.

Table 15: Correction factors

$t_v$ °C	-10	0	10	20	25	30	40	50
R 717 (NH <sub>3</sub> )	0.84	0.88	0.92	0.97	1	1.03	1.09	1.16
R 22	0.76	0.81	0.88	0.96	1	1.05	1.16	1.31

## Capacity

	0.2	25.8	34.5	45.0	56.8	72.1	87.5

**NOTE:**

Capacities are based on liquid temperature  $t_l = +25$  °C ahead of evaporator. The table values refer to the evaporator capacity and are given as a function of evaporating temperature  $t_e$  and pressure drop  $\Delta p$  across valve. Capacities are based on dry, saturated vapour ahead of valve. During operation with superheated vapour ahead of valve, the capacities are reduced by 4% for each 10 K superheat.

### Correction factors

When sizing valves, the evaporator capacity must be multiplied by a correction factor depending on liquid temperature  $t_l$  ahead of expansion valve. When the corrected capacity is known, the selection can be made from the table.

Table 18: Correction factors

$t_v$ °C	-10	0	10	20	25	30	40	50

<sup>(1)</sup> With coil, without flanges

## Solenoid valve, type EVRA and EVRAT

### Weight of coil:

10 W: approx. 0.3 kg

12 and 20 W: approx. 0.5 kg

### Weight of flange set:

For EVRA 3, 10 and 15: 0.6 kg

For EVRA 20: 0.9 kg

Table 34: EVRA 25, EVRA 32 and EVRA 40 Coil with terminal box

<sup>(1)</sup> For ordering coils; please download the data sheet AI237186440089 from [www.danfoss.com](http://www.danfoss.com)

<sup>(2)</sup> Includes flange gaskets and bolts. For ordering flanges; please download the data sheet AI249786497379 from [www.danfoss.com](http://www.danfoss.com)

## Certificates, declarations, and approvals

The list contains all certificates, declarations, and approvals for this product type. Individual code number may have some or all of these approvals, and certain local approvals may not appear on the list.

Some approvals may change over time. You can check the most current status at [danfoss.com](http://danfoss.com) or contact your local Danfoss representative if you have any questions.

**Table 39: Valid approvals**

## Online support

Danfoss offers a wide range of support along with our products, including digital product information, software, mobile apps, and expert guidance. See the possibilities below.

### The Danfoss Product Store

The Danfoss Product Store is your one-stop shop for everything product related—no matter where you are in the world or what area of the cooling industry you work in. Get quick access to essential information like product specs, code numbers, technical documentation, certifications, accessories, and more.

Start browsing at [store.danfoss.com](https://store.danfoss.com).

### Find technical documentation

Find the technical documentation you need to get your project up and running. Get direct access to our official collection of data sheets, certificates and declarations, manuals and guides, 3D models and drawings, case stories, brochures, and much more.

Start searching now at [www.danfoss.com/en/service-and-support/documentation](https://www.danfoss.com/en/service-and-support/documentation).

### Danfoss Learning

Danfoss Learning is a free online learning platform. It features courses and materials specifically designed to help engineers, installers, service technicians, and wholesalers better understand the products, applications, industry topics, and trends that will help you do your job better.

Create your Danfoss Learning account for free at [www.danfoss.com/en/service-and-support/learning](https://www.danfoss.com/en/service-and-support/learning).

### Get local information and support

Local Danfoss websites are the main sources for help and information about our company and products. Find product availability, get the latest regional news, or connect with a nearby expert—all in your own language.

Find your local Danfoss website here: [www.danfoss.com/en/choose-region](https://www.danfoss.com/en/choose-region).

### Spare Parts

Get access to the Danfoss spare parts and service kit catalog right from your smartphone. The app contains a wide range of components for air conditioning and refrigeration applications, such as valves, strainers, pressure switches, and sensors.

Download the Spare Parts app for free at [www.danfoss.com/en/service-and-support/downloads](https://www.danfoss.com/en/service-and-support/downloads).

### Coolselector®2 - find the best components for you HVAC/R system

Coolselector®2 makes it easy for engineers, consultants, and designers to find and order the best components for refrigeration and air conditioning systems. Run calculations based on your operating conditions and then choose the best setup for your system design.

Download Coolselector®2 for free at [coolselector.danfoss.com](https://coolselector.danfoss.com).
